The Weston FIRST robotics program at Weston Public Schools is now recruiting new students for the start of next year's competition season in August!

Weston's largest after school STEM program has earned international acclaim for its structure and curriculum. Spanning grades 4-12, its robotics teams work side-by-side in their state-of-the-art robotics and engineering labs, made possible by WEEFC funding, to hone skills in mechanical design, programming, AI, and collaborative problem-solving. Over the years, Weston teams have advanced to both State and World Championships, bringing home multiple titles and the state and world level.

For more details about the program, check out the parent/student information sheet.

All **new students** interested in joining a team next season should complete the WPS Robotics Interest Form before the end of the school year to be included in communications and planning for the upcoming season.

Teams are typically formed at the end of the school year and the beginning of August when the new season challenge is revealed.
